Energy Efficiency Feasibility Assessment

Feasibility Assessment Includes:

- **Site Walk Through**—to obtain an understanding of the facility and equipment operation, gather process & utility data, and to preliminarily assess potential energy savings.
- **Discuss**—current plant operations, and gather operating and cost data with plant personnel.
- **Develop**—basic process, equipment and facility improvement alternatives with the greatest energy saving potential.
- **Estimate**—Capital costs based on budgetary equipment prices and preliminary operating cost savings.
- **Research/Recommend**—grant/rebate funding opportunities.

**This assessment will identify potential short and long range
energy saving opportunities for your business.**
